Accountability

Warmth

Honesty

Compromise

Empathy

Support

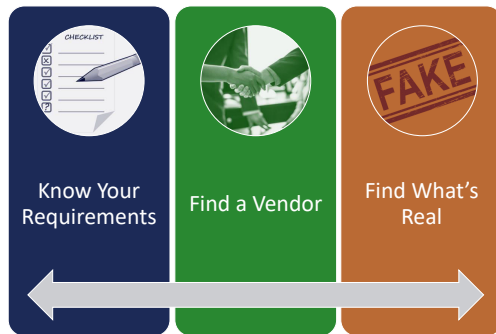

Kindness

So how do we get there?

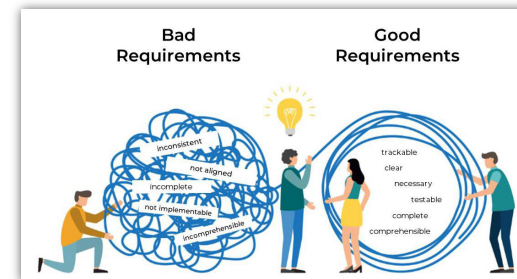

### Technology Selection Process

Three Steps to Success

### Step 1 – Know Your Requirements

## Requirements

If you don't know what you need, how will they...

## Identify the Real Problem

- Don't be fooled by large amounts of data
  - If you are going to collect it, analyze it
- Dive below the surface
  - Events are above the surface, causes are below
- Widen your focus
  - Get multiple perspectives on the problem
- Define the boundaries of the problem
  - Avoid generalizations to stay focused
- Identify causes, effects and key stakeholders
  - What are the root causes, how can stakeholders be part of the solution
- Analyze the future
  - Don't just think about your business today, think about tomorrow

## Once the Problem is Identified

- Do Research!

## Requirements

- Identify what problem you are trying to solve
- Have the right people in the room to discuss needs
  - \*Include the people who will be using the product
- List out Needs vs Wants.
- Sleep on it and review the list again

## What the document looks like...

- Purpose
- Intended Audience and Intended Use.
- Product Scope.
- Definitions and Acronyms.
- User Needs.
- Assumptions and Dependencies.
- Functional Requirements.
- External Interface Requirements.
- System Features.

## Additional Things to Think About

- Do you have resources in house to support the project
  - Both Project Management & Technical Resources
- Do you need Professional Services?
  - For implementation, post implementation, training?
- Do you need additional infrastructure(Cloud or Hardware)?
- Have you considered security implications?

## Step 2 – Find a Vendor Partner

## Definitions

VENDOR

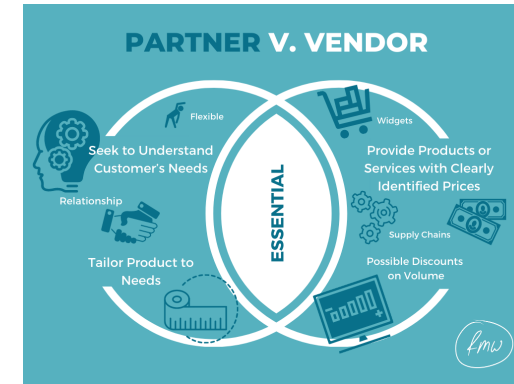

A vendor is a general term used to describe any supplier of goods or services. A vendor sells products or services to another company.

## Definitions

A business partner is a commercial entity with which another commercial entity has some form of alliance. Both parties work together to achieve a common goal.

## So where do I find a partner?

- Ask Peers, Friends etc.
- Attend Conferences and chat with companies at their booths
- Interview vendors to find who wants to be a partner

## So how do I find a partner?

- It's a two-way street, you will have to give something too.
- Look for companies that use the word "Partner".
- If you get bounced around sales people, move on.
- Make sure they are listening to your needs and not just telling you what they have that "Might" fit your needs.
- Ask a lot of questions.
- Do reference checks.

### Step 3 – What's Real vs VaporWare

### What is VaporWare?

It comes in all forms, shapes and sizes. It is the pot of gold at the end of the rainbow, it's what you want to hear. But its not real.

## How to Spot VaporWare

Do a demo, setup a sandbox...USE the software, product or tool.

The key is to use it yourself, don't just believe what you see in a PowerPoint slide deck or in a video.

Watch out for phrases like:

“It’s on our roadmap”

“We’ve been looking into it and are getting close”

## How to Find the Right Product for You!

## How to Find the Right Product for You!

Use the requirements you created in Step 1 to work with your Partner you found in Step 2. Do hands on demos with real end users as shown in Step 3.

## How to Find the Right Product for You!

- Tell them the problem you are trying to solve
- Have working sessions to review your needs and requirements
- Be open and honest about challenges you are having
- Share you desired end state

You may be “dating” more than one company during this period.

| Criteria                             | Vendor A      |           |             |             | Vendor B  |             |            |      |
|--------------------------------------|---------------|-----------|-------------|-------------|-----------|-------------|------------|------|

How Do You Know the Vendor Partner is Good?

Are they in it for the long haul...

Are They Good?

- Did they listen to you?
- Did they deliver on their promise?
- Are your users happy with the solution?
- Did they deliver on budget and schedule?
- Did they solve the problem you identified at the beginning?
- Will you call them again for your next problem?

Sometimes you must trust your gut
